Device Index

The following index lists the device numbers of the products contained in this selector guide and references the page number where each device is described in greater detail.(1) The listing is in a numeric sequence organized in a "computer sort." This means that all the devices listed herein follow a 39 character alphabet. This "new" alphabet starts with a Period, a Dash and a Slash (. – /), followed by the 26 letter alphabet (A thru Z), which is then followed by 10 numbers (0 thru 9).

The ranking or hierarchy of this 39 character alphabet is as follows:

. – / A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9

Therefore, if you are looking for a device starting with a letter of the alphabet like an MC1741CP, it would appear before a device starting with a number, such as 2N1132.

To find a device in this index, start with the first character of the device and find that section of the index; next move to the second character in the device number, and move to that character within the same portion of the listing; and so on until the device number is found. In other words, it is used just like a dictionary, character by character.

For example, to find the 2N6837, go to that section of the listing that begins with the number "2" (Notice that the section follows all devices that begin with a letter of the alphabet or "1"). Next, find that portion of the listing that begins with "2N" (Notice it follows those devices that begin with "2K"). Next, find that portion of the listing that begins with "2N6" (Notice it follows those devices that begin with "2N5"). Continue looking for those portions that begin with the next consecutive character until you have found the entire number.

Because of the way "Computer Sort" works it is not necessary to be concerned with the absolute value or number of characters in a part number, just move across the device part number, left to right, one character at a time until you find the number.

Subject Index

This listing is intended to simplify the identification of products where specific device numbers are not known.
